

FOR IMMEDIATE RELEASE:

Calgary, Alberta, Canada, June 10, 2008.

European Approval of VACCI-TEST™ Tetanus

Vacci-Test Corporation (“VTC”) of Calgary, Alberta, Canada is pleased to announce that its subsidiary, Vacci-Test Europe, has received the CE mark for its first product, VACCI-TEST™ Tetanus.

VACCI-TEST™ Tetanus is a rapid, sensitive, lateral flow diagnostic test to determine the immune status of an individual by detecting the presence of circulating antibodies. This time saving, precise diagnostic device will allow emergency and point-of-care physicians to determine if a patient needs to be revaccinated.

Since VACCI-TEST™ Tetanus is intended for use as a diagnostic tool in humans the receipt of the CE mark is the last approval step before marketing the product. The CE mark signifies that the product complies with all health, safety and environmental directives of the European Union.

A rapid reliable point-of-care Tetanus test avoids the need and expense of unnecessary revaccination and will play an important role in managing health care expenses in today’s cost conscious environment.

Mr. William J. Hogan, Vice-Chairman and Founder of VTC, said “The approval of VACCI-TEST™ Tetanus is the first in a series of product approvals and launches intended for 2008 and demonstrates the company’s commitment to delivering value to its shareholders”.

VTC is a privately held Canadian company that specializes in second generation magnetic lateral flow tests for the rapid and precise detection and measurement of immune status and infection in animals and humans, and pathogens in food. A key element in VTC’s product pipeline is a series of tests for the rapid measurement of pathogens such as E.coli O157:H7 associated with the human food chain.
